Hide Details

From: Matthew Ohl/R5/USEPA/US@MSO365

To: Group R5Foia/R5/USEPA/US@EPA,

History: This message has been replied to and forwarded.

Could this request be processed as a FOIA? The requestor would like to have the reports from completed cleanups at the site.

Thank you.

Subject: Re: Johns Manville

Hullo Matthew,

I am sorry to bother you again on a matter that you were able to assist me on back in March this year. We have a 6 hectare site on which we have some 68,000 cubic metres of asbestos wastes to remove and place into containment cells.

I really appreciated the link you provided us with to the action memorandum on the cleanup of a Johns Manville site.

We have prior experience with the dust controls for quarrying a basalt deposit that contained tremolite and numerous projects for removing soil containing fragments of asbstos cement.

Our regulatory authorities who are reviewing the dust control strategies we have devised for the 6 hectare site project are interested in lessons learnt from other sites who have excavated similar large quantites of asbestos containing materials.

Would it be possible to access the reports on the John Mansville project that present the results of how the project was successfully undertaken?

Looking forward to hearing from you ,

Kind regards,

Richard Benbow

Principal Consultant

Benbow Environmental
